DATE MAILED: 02/16/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/772,080

Applicant(s)

TANIGUCHI ET AL.

Examiner

Kevin M. Burd

Art Unit

2631

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 November 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3 and 7-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 3, 7-11 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____

1. This office action, in response to the amendment filed 11/24/2004, is a non-final office action.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/24/2004 has been entered.

Response to Amendment

3. Applicant's arguments, see pages 6-10 of the remarks, filed 11/24/2004, with respect to the rejections of claims 3 and 7-11 under 35 USC 102(e) and 35 USC 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, new grounds of rejection is made in view of the previously state references and the instant application's disclosed prior art, specifically figure 1.
4. The previous objection to claim 8 is withdrawn.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 8, 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over the instant application's disclosed prior art, specifically figure 1.

Regarding claims 8, 10 and 11, Wang discloses a delay adjusting circuit in a phase locking loop shown in figure 5. A variable delay circuit is disclosed in element 533. This delay circuit is implemented using a number of buffers or inverters connected in a ring oscillator arrangement (column 6, lines 61-63). The delay circuit 533 outputs a signal to the divider 539. The divider 539 generates clock feedback to the phase comparator 516. The divider circuit divides the frequency of the clock output by an amount from 1 to about 256 (column 7, lines 1-4). The phase comparator compares the phases of the input signal and the frequency divided feedback signal (figure 5 and column 7, lines 5-20). The output of the phase comparator 516 outputs signals to the charge pump. The charge pump will output a control signal 529 to adjust some delay cells 533 to maintain lock or phase relationship (column 6, lines 58-60). The frequency of the divided signal can be less than the frequency of the input signal. The PLL will attempt of lock these signals to the same frequency.

Wang does not disclose using a dummy circuit to delay a signal from the frequency divider by a fixed delay time. However, the instant application's disclosed

prior art shows, in figure 1, a dummy circuit delaying the signal from the frequency divider. It would have been obvious for one of ordinary skill in the art at the time of the invention to incorporate the dummy circuit of the instant application's disclosed prior art into the delay adjusting circuit of Wang. The dummy circuit allows the signal propagation delay to be equal so the phase relationship of the feedback clock signal and the input clock signal will be the same. The fixed delay will allow that only small adjustments to be made in the delay cells of Wang reducing the complexity of that circuitry.

6. Claims 3, 7 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wang et al (US 6,448,820) in view of Hanke, III et al (US 5,376,848) further in view of the instant application's disclosed prior art, specifically figure 1.

Regarding claims 3, 7 and 9, Wang discloses a delay adjusting circuit in a phase locking loop shown in figure 5. A variable delay circuit is disclosed in element 533. This delay circuit is implemented using a number of buffers or inverters connected in a ring oscillator arrangement (column 6, lines 61-63). The delay circuit 533 outputs a signal to the divider 539. The divider 539 generates clock feedback to the phase comparator 516. The divider circuit divides the frequency of the clock output by an amount from 1 to about 256 (column 7, lines 1-4). The phase comparator compares the phases of the input signal and the frequency divided feedback signal (figure 5 and column 7, lines 5-20). The output of the phase comparator 516 outputs signals to the charge pump. The charge pump will output a control signal 529 to adjust some delay cells 533 to maintain

Art Unit: 2631

lock or phase relationship (column 6, lines 58-60). The frequency of the divided signal can be less than the frequency of the input signal. The PLL will attempt to lock these signals to the same frequency. Wang does not disclose dividing the input signal by a first division rate. Hanke discloses a delay matching circuit shown in figures 5 and 6. Figure 6 discloses a divider circuit capable of dividing the input signal by a number of values to ensure the input signal and the output signal are phase matched. It would have been obvious for one of ordinary skill in the art at the time of the invention to incorporate the teaching of Hanke into the apparatus and method of Wang. By dividing the input frequency, the original signal is locked to the output signal and a more accurate delay adjustment is formed (column 8, lines 31-37).

The combination of Wang and Hanke does not disclose using a dummy circuit to delay a signal from the frequency divider by a fixed delay time. However, the instant application's disclosed prior art shows, in figure 1, the dummy circuit delaying the output of the frequency divider. It would have been obvious for one of ordinary skill in the art at the time of the invention to incorporate the dummy circuit of the instant application's disclosed prior art into the delay adjusting circuit of the combination of Wang and Hanke. The dummy circuit allows the signal propagation delay to be equal so the phase relationship of the feedback clock signal and the input clock signal will be the same. The fixed delay will allow that only small adjustments to be made in the delay cells of the combination and thereby reducing the complexity of that circuitry.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin M. Burd whose telephone number is (571) 272-3008. The examiner can normally be reached on Monday - Thursday 9 am - 5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mohammad Ghayour can be reached on (571) 272-3021. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
